DETAILED ACTION

Allowable Subject Matter

Claims 23 – 46 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to independent claim 23, the prior art on record fails to expressly disclose a radiation sensing device detecting photons or particles, associated with at least one circuit for acquiring and counting detection events, wherein the acquisition circuit including a pulse signal processing circuit delivering count pulses corresponding to detection events, *specifically* comprising a continuously discharging device configured to continuously reset the pulse signal processing circuit, and a discontinuously resetting circuit configured to discontinuously reset the pulse signal processing circuit, in combination with the rest of the claimed limitations.

JP 07-239385 A too Adachi is considered the closest prior art known, teaches similar limitations but is silent to the claimed limitations. Specifically, Adachi fails to show a continuous discharge device for resetting the circuit 2a (i.e., amplifier).

As such, absent hindsight reasoning, the prior art on record fails to suggest or render obvious the claimed limitations as claimed in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
